

NOTICE OF SCHEDULE FOR WATER SYSTEM FREE CHLORINATION APRIL 4, 2025 – APRIL 13, 2025 Lauderhill Water Division to Run Yearly Free Chlorination in April 2025

The *Florida Department of Environmental Protection* recommends *Preventative Maintenance Procedure* as an annual practice. The City of Lauderhill's Water Division is conducting its yearly *Preventative Maintenance Procedure* by changing its disinfection process from chloramination to free chlorination. This process will temporarily affect the City's chlorine levels. This procedure is intended to improve the disinfection levels of our water distribution system.

This *Free Chlorination Procedure* will begin on Friday, April 4, 2025 at 12 midnight and will end on Sunday, April 13, 2025 at 12 midnight.

During this *Free Chlorination Procedure*, your water quality will absolutely continue to meet **ALL** Federal, State and local standards for clean water and ***will remain safe for drinking, bathing, cooking, and other household purposes.*** Please note that during this time you may observe a slight change in the taste, odor and/or color of your tap water. Do not be alarmed, **your water is safe.**

This *Free Chlorination Procedure* will affect residents served by the City of Lauderhill. Residents who are on kidney dialysis or those who have other medical conditions should contact their health care provider for more information to determine if their treatment needs to be changed during this process. In addition, anyone who uses City water for fish tanks or aquariums must adjust your chlorine treatment levels during the procedure period as well. If you see temporary water discoloration, please run the water in your faucets until the water runs clear.

Finally, be advised in the event you see water running from fire hydrants in your neighborhoods, it is part of the normal maintenance process.

Should you require additional information, please contact the Water Treatment Plant at (954) 730-2972. We thank you for your patience in this matter.
